

Facility and Operational Improvements 2017

1. 4 unloads for Production Water
2. 4 unloads for Dirty rig fluid
3. 2 unloads for Clean rig fluids
4. New truck tank wash installed and operational
5. New perimeter dike around entire location, updated internal dikes with fresh rock
6. New operational focus on safety and house keeping of the facility.

Well update:

After our extensive workover operation on the well, the well is now capable of taking approximately 4000 bbl/day of fluid. Prior to the workover the well was below 1500 bbl/day. A new state of the art horizontal disposal is being permitted in November and is slated to be drilled in the spring of 2018. Conservative estimates put the new well capacities near 15,000 bbl/day, or up to 20,000 bbl/day.
